

# 18v photovoltaic panel recommendation

## Overview

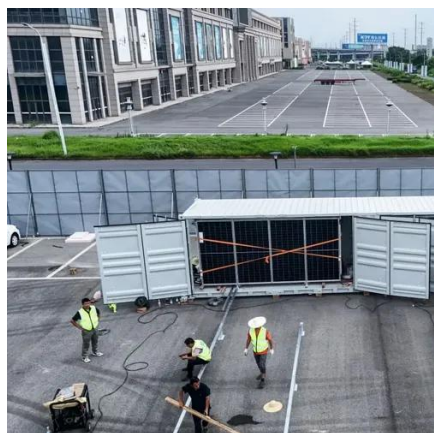

---

The true maximum power point of these panels (and most modern 12V panels) is close to 18V and thus should be considered 18V panels not 12V. Also, most panels advertised as 24V are really 36V or two 18V panels in series with an open-circuit voltage well. It's a bit confused about some of the stats on panels we have been looking at, for example, 100 watt 12 volts panel and 100 watt 18 volts panel. In the majority of cases there are no differences other than name. What are some of the top solar panel brands available at The Home Depot?

We carry many solar. Check each product page for other buying options. for reference ONLY, the Raspberry Pi, display, solar power manager are NOT included.
