

# Actively develop photovoltaic energy storage

## Overview

---

By integrating energy storage solutions, such as batteries, with PV systems, it becomes possible to store excess energy generated during peak sunlight hours for utilization during periods of low generation or high demand. The AES Lawai Solar Project in Kauai, Hawaii has a 100 megawatt-hour battery energy storage system paired with a solar photovoltaic system. Sometimes two is better than one. The reason: Solar energy is not always produced at the time. The coordinated development of photovoltaic (PV) energy storage and charging systems is crucial for enhancing energy efficiency, system reliability, and sustainable energy integration. This conversion process occurs through the photovoltaic effect, wherein solar panels, composed of semiconductor materials, absorb solar.
