

Anti-seismic design of communication base station inverter

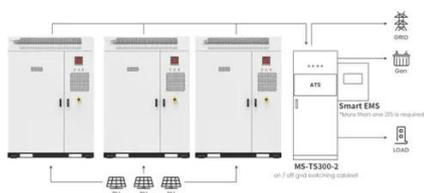

Overview

OEM inverters must be designed to meet EN 61000 EMC standards, with choke filters and shielded layouts. Networks usually set a 96-hour autonomy rule. If a storm blocks solar panels, the station should still record for four days. That means battery size and inverter . Do communication base stations perform post-earthquake functionality using Bayesian network?

A method to evaluate the post-earthquake functionality of communication base stations using Bayesian network is developed. The dependence between the equipment and its hosting building structure, and the. The design mechanisms and methods of the invention are intended to minimize problems related to the safety of structures in the event of natural phenomena such as earthquakes, tornadoes, and strong winds. This method involves placing flexible bearings between a building's.
