

Base station installed on top of container

Overview

Concrete pile caps or steel plates are installed at the top. The container is then placed and secured with bolts or welds, typically at each corner and any mid-span supports. Whether you're placing a single unit or stacking up a full-on container home, the right base keeps everything level, secure, and safe from the elements. Without the right base, your shipping module structure could sink, shift, or suffer. Our FREE Container Home Cheat Sheets will help you decide if shipping containers are right for you, and whether to build or buy! I want the Cheat Sheets! A foundation is often the first significant site work undertaken for a shipping container project.
