

Bolivia reduced carbon emissions

Overview

La Paz, Jun 6 (Prensa Latina) Bolivia reduced the emission of 1,740 tons of carbon dioxide per year thanks to environmentally-sustainable production measures up to the first four months of 2024, an official source ensured on Thursday. The monitoring, reporting and verification (MRV) of climate initiatives, policies and investments can ascertain their efficacy in tackling climate change. Governments can track progress against national and sectoral goals, such as Nationally Determined Contributions (NDCs). Businesses can identify. This interactive chart shows the breakdown of annual CO2 emissions by source: either coal, oil, gas, cement production or gas flaring. This breakdown is strongly influenced by the energy mix of a given country, and changes as a country shifts to or from a given energy source. In accordance with the Paris Agreement (2015), governments.
