

# Connection of photovoltaic panels with different powers

## Overview

---

The short answer is, yes, you can mix solar panels that have different wattages. Different wattage panels have different voltage and amps. Mixing solar panels of various voltage or wattage, or produced by different manufacturers, is a frequently asked question by most DIYers. Though mixing different solar panels is not recommended, it's not forbidden and things would be ok as long as each panel's electrical parameters (voltage. When we talk about solar panels, three main electrical values matter: Mixing panels with different wattages is like having team members who work at different speeds. It's possible, but you need the right strategy to make it work efficiently. We begin with an essential overview of series and parallel wiring configurations. In series. Lots of solar power means lots of PV modules.
