

# Cyprus Outdoor Power Supply Monopoly

## Overview

---

The Cyprus power system has the typical characteristics of isolated Mediterranean island grids: largely unexploited renewable energy potentials, heavy dependence on liquid fossil fuel imports, limited capability (i. low system inertia) to react to contingencies and events, high. Last month, we threw away more than 18 gigawatt hours of solar power – enough to power the average Cypriot household for nearly 2,000 years. This process, referred to as 'curtailment', is where the system operator is forcibly switching off solar parks and now even residential systems in order to. Electricity Independence Day on October 1st, as market becomes liberalised October 1 marks the end of the electricity authority (EAC) monopoly in Cyprus as 17 open market participants join a new competitive commercial era, having signed a contractual framework of rules and regulations late last. By Theodoros Konstantinou, Postdoctoral Research Fellow, Energy Environment and Water Research Centre, The Cyprus Institute The launch of the competitive electricity market marks a major milestone in Cyprus's energy transition. Until recently, electricity generation and supply were dominated by a. bilateral physical forward contracts are notified to the Market Operator (MO) by Over-the-Counter (OTC) market gate closure.
