

# En 16001 energy management systems

## Overview

---

The EN 16001 standard which came into force in July 2009 defines standardised EU-wide criteria for an energy management system. Energy management systems help to increase energy efficiency in companies and organisations. The document follows the headings in the I. The preceding European standard EN 16001 already contributed to significant improvements, newly adapted to ISO 50001. The guidelines are intended to support organisations of any type, size and sector in the implementation of an energy management system according to. For many, the answer is an Energy Management System (EnMS) - a framework for the systematic management of energy.
