

# Energy storage system and component testing

## Overview

---

This paper contains an overview of the system architecture and the components that comprise the system, practical considerations for testing a wide variety of energy storage technology, as well as a recent test scenario for community energy storage system testing. UL 9540, the Standard for Energy Storage Systems and Equipment, covers electrical, electrochemical, mechanical and other types of energy storage technologies for systems intended to supply electrical energy. This is driven. Energy storage systems consist of equipment that can store energy safely and conveniently, so that companies can use the stored energy whenever needed. The system performs functional, performance, and application.
