

# How many watts is a good solar panel

## Overview

---

Most residential panels in 2025 are rated 250–550 watts, with 400-watt models becoming the new standard. A 400-watt panel can generate roughly 1.5 kWh of energy per day, depending on local sunlight. household's 900 kWh/month consumption, you typically. Solar panels degrade slowly, losing about 0.5 kWh of energy per day, depending on local. Is 400 watts good?

420 watts?

Should you opt for the 450-watt panel?

Is it worth the extra cost?

About 97% of home solar panels installed in 2025 produce between 400 and 460 watts, based on thousands of quotes from the EnergySage Marketplace. This can vary due to: Example: A 1.7 m<sup>2</sup> panel with 20% efficiency will produce about 340W in full sun. Key Takeaway: Installing a solar panel system in Nevada and Las Vegas can significantly reduce your electricity bills by 80-100%, according to this ENERGYSAGE report. Your system must meet your usage needs. Here's the tricky part: two systems with the same total kilowatts can generate very different amounts of energy.
