

How to store wind power

Overview

However, storing excess wind energy is a complex process that requires innovative solutions such as battery technology, pumped storage, and thermal energy systems. These systems can enhance grid efficiency by utilizing compressed air, flywheel storage, and hydrogen production. Lithium-ion batteries are favored for their high energy density, typically ranging from 150 to 250 Wh/kg, with over 90% efficiency. Pumped hydro storage (PHS) involves elevating. One of the most popular ways to store wind energy is in batteries. Wind is an intermittent energy source —it doesn't blow consistently.
