

Inspection and maintenance of wind turbine blades

Overview

ACP's Wind Performance Committee has developed Recommended Practices for Wind Turbine Blades to provide detailed recommendations for wind turbine blade maintenance, bringing forth the clean energy industry's best practices for inspection, transportation, repair, and maintenance. Over time, wind turbine blades are exposed to environmental and operating factors that can cause irregularities and damage. It is now a well-known fact that blades will require maintenance over the lifetime of a windfarm, and a structured approach is required to minimize the associated costs. Wind turbine blades, which can reach lengths of up to 107 metres, are subjected to harsh environmental conditions, including high winds, rain, snow, and. TLDR: Keep your wind turbine running smoothly and safely with this comprehensive inspection & maintenance checklist! It covers everything from pre-planning to post-inspection reporting, ensuring thorough checks of towers, blades, gearboxes, electrical systems, and more. Our expertise covers all major.
