Latest planning for energy storage power stations in western South Africa

Overview

Last week, IPPs Mulilo Renewable Project Development and Norwegian renewables firm Scatec announced significant investments in battery energy storage projects in the North West and Northern Cape provinces. The Hex BESS is the first project to be completed under Eskom's flagship BESS project announced in July 2022 to help alleviate the pressure on the national electricity grid. The BESS project serves as a direct response to meet one of the urgent needs to address South Africa's long-running. Utility-scale battery storage could be one pillar to provide additional grid stability by helping to meet peak demand, help integrate variable renewables, and, especially for industrial consumers, provide continuous electricity during load shedding and outages. South Africa is aiming to procure. e energy security. Announced by President Cyril Ramaphosa in July 2022, it outlines a bold set of actions aimed at fixing Eskom and adding as much new generation capacity as possible, as quickly as possible, to close the gap in holds to inves es and households.
