

Lithium battery plus inverter life

DISTRIBUTED PV GENERATION + ESS

Overview

While lead-acid batteries typically last 3-4 years, a lithium ion battery for inverter can run for 8-10 years or more, depending on usage. This makes it a cost-effective investment in the long run. An inverter battery lasts about 5 to 10 hours when fully charged. Whether you are building a residential solar setup, a commercial backup power solution, or a mobile energy system for an RV, marine vessel, or electric vehicle. When looking at lithium ion batteries for inverters, there are three main specs to consider: capacity measured in amp hours (Ah), energy stored in watt hours (Wh), and the voltage rating (V). Take a standard 100Ah battery running at 12 volts for example. Multiply those numbers together and we get. Lithium offers unmatched performance, a longer lifespan, and better efficiency than traditional batteries. First and foremost, the compatibility of the Ecarke inverter with Milwaukee 18V lithium batteries (like the 48-11-1815, 48-11-1820, and 48-11-1822) is a significant advantage.
