

Montenegrin oil refinery uses photovoltaic containers for bidirectional charging

Overview

This paper proposes a solar-assisted method for a petrochemical refinery, considering hydrogen production deployed in Yanbu, Saudi Arabia, as a case study to greenize oil refineries. Energy Generation: Solar Harvesting: The primary function of the system is to harness solar energy using photovoltaic (PV) panels operating the processing of fossil-based oil refineries to decarbonize their operation. A validated ASPEN HYSYS model was used to investigate the products produced from heavy crude oil in the refinery.
