The application relates to the field of new energy, in particular to a charging method and a charging system of a photovoltaic tracking bracket, wherein the method comprises the following steps: when the photovoltaic tracking bracket is in a non-rotating state . This report provides an in-depth technical analysis of PV-powered charging stations (PVCS), which combine on-site solar electricity generation with electric vehicle (EV) charging infrastructure. Photovoltaic (PV) tracking brackets play a crucial role in solar energy systems by optimizing the orientation. By using the BEV with controlled charging, it exhibits the potential to accelerate the integration of higher shares of residential solar power systems for BEV CS [94]. A fast Zone 2 depicts another situation in which PV, battery, and grid all work collectively to satisfy EV demand via PV2V, B2V. Therefore, for photovoltaic bracket products, they need to meet not only the conventional requirements of high power generation and low cost in the era of grid parity but also have extremely strong corrosion resistance. Established in 2021, Xiamen FarSun Technology Co.
