

# Photovoltaic bracket screw selection

## Overview

---

Stainless steel screws: Commonly A2-70 (tensile strength  $\geq 700\text{MPa}$ ) or A4-80 (suitable for high-load scenarios, such as brackets of large photovoltaic power stations). Carbon steel screws: At least grade 8.8 (tensile strength  $\geq 800\text{MPa}$ ), need to be used with spring washers. When it comes to solar panel mounting, choosing the right screws/bolts for your solar mount is crucial for a safe and secure fit. Here are a few key factors to consider when making your selection: 1. Material: Priority is given to weather-resistant stainless steel screws or bolts to ensure that. Ensure maximum reliability in your photovoltaic panel installation: choose our specialised screws and bolts, made of stainless and galvanised steel, tested with thousands of solar power systems in Italy and Europe, according to the highest industry standards. The suitable mounts secure the panels firmly and influence their energy absorption efficiency by positioning them at the ideal angle and orientation. Solar adjustable roof hook Over recent decades, with the increasing environmental awareness and demand for renewable energy, the photovoltaic panel industry. Material selection: consider environmental factors such as humidity, salt spray, and temperature changes to select appropriate screw and bolt materials.
