

# Photovoltaic energy storage synergy

## Overview

---

Photovoltaic systems convert sunlight into electrical energy, creating an immediate demand for effective management solutions, such as energy storage systems (ESS). The interplay between photovoltaics and storage fosters enhanced energy security and supply reliability. 2024 was the hottest year on record, with global temperatures reaching 1.55°C above pre-industrial levels. The AES Lawai Solar Project in Kauai, Hawaii has a 100 megawatt-hour battery energy storage system paired with a solar photovoltaic system. Sometimes two is better than one. Much of NLR's current energy storage research is informing solar-plus-storage analysis. It uses a "PV + Storage + Charging" solution to maximize renewable energy.
