

Photovoltaic panels installed on the roof for banquets

Overview

Roof-mounted solar panels are photovoltaic panels that are installed on the roof of a building. These panels are designed to capture sunlight and convert it into electricity, which can then be used to power your home or business. This method of harnessing solar energy is rapidly gaining popularity due to its potential for reducing electricity bills. Professional Installation is Critical for Safety and Warranties: Solar panel mounting involves working at dangerous heights with structural modifications that can void warranties if done incorrectly. Professional installation typically includes 5-25 year warranties and ensures compliance with 2025. These are small solar panels that can be integrated directly into the roof, creating a more discreet and aesthetically pleasing solar system.
