

# Power battery control unit BMS main monitoring functions

## Overview

---

Its seven functions include battery status monitoring, battery protection, battery balance control, charge and discharge management, temperature management, fault diagnosis and alarm, data communication and remote monitoring. To ensure the battery runs safely and effectively, it is responsible for protecting, monitoring, and controlling it. Consider it similar to an automobile's engine control unit (ECU). The BMS keeps an eye on voltage, current, and temperature to maintain the health of a battery, much like the ECU. Battery Management System (BMS) is the “intelligent manager” of modern battery packs, widely used in fields such as electric vehicles, energy storage stations, and consumer electronics.
