

Remove the protective film on the photovoltaic panel

Overview

The Gentle Heating Method is an effective and safe way to remove the plastic film from a solar panel by softening the adhesive underneath. This method involves using a hairdryer or heat gun to apply controlled heat to the panel's surface, making the film easier to peel off without. New solar panels often arrive with protective film—but should it stay on?

This comprehensive guide explains the crucial difference between factory shipping films (which must be removed) and aftermarket plastic covers (which have specific valid uses). The film is designed solely for shipping and handling protection, and is not intended. After a few years solar panels on landscape lights or garden lights, the top forms a white film that's hard to remove. Its purpose is not to remain and if the protective film fails to be removed it will surely have an effect upon efficiency. Efficiency of a solar panel ranges from 15%.
