

Republic of china electric vehicle charging infrastructure

Overview

Earlier this month, China unveiled a three-year action plan to improve the country's EV charging infrastructure, aiming to establish a nationwide network of 28 million charging facilities by the end of 2027. The plan, jointly issued by the National Development and Reform Commission (NDRC), asks local authorities to put together construction plans for highway service. China's electric vehicle charging expansion is no longer just a domestic infrastructure story—it is a signal of a deeper global shift in how mobility, energy, and data ecosystems are being architected. What is really driving this acceleration?

□□ Grid-first thinking Energy utilities are redesigning.

Republic of china electric vehicle charging infrastructure

[china-ev-charging-infrastructure-growth-2025-study](#)

Abstract China's electric vehicle (EV) charging infrastructure is undergoing remarkable expansion, driven by strategic governmental policies, private sector innovation, and the integration of advanced ...

China unveils three-year plan to enhance EV charging infrastructure
