

# Riga electric vehicle safety

## Overview

---

Our testing and calibrations laboratories, which are ISO/IEC 17025 accredited, focus on the electric car safety aspects of e-mobility. This includes functional safety, where we apply standards such as ISO 26262 and IEC 61508, as well as electrical, chemical and mechanical. The city is at the forefront of the electric vehicle (EV) revolution in the region, driven by innovative trends and a rapidly growing network of charging stations. This article delves into the latest trends in electric vehicles and the dynamic development of charging infrastructure in Riga. Currently, electric car charging in Latvia is possible in the network of “e-mobi” electric car charging stations established by “Road Traffic Safety Directorate” (CSDD), as well as in “Elektrum” charging stations installed by Latvenergo AS. Electric cars are being judged by professionals, car enthusiasts and public figures. In short, we help to deliver product and personal safety, and reduce your risk of liability claims. Our development plan and energy efficiency program. This will provide convenient and fast access to more than 300 charging stations nationwide within a single app.
