

Rotating tower solar power generation device

Overview

A high-efficiency, shadow-free, auto-rotating solar PV tower has been built by scientists at the Indian Institute of Technology in Delhi, India. This tower can generate electricity from solar panels in a given area all day long. Texas startup Janta Power has secured \$5. The funding round was led by MaC Venture Capital with support from Collab Capital. The investment shows strong confidence in 3D solar. Rotating solar towers represent a progressive approach to harnessing solar energy efficiently. They offer higher energy production compared. In power tower concentrating solar power systems, a large number of flat, sun-tracking mirrors, known as heliostats, focus sunlight onto a receiver at the top of a tall tower. The device comprises a solar energy receiving assembly, a heat transfer working medium circulation assembly, a low boiling point power generating working medium circulation assembly, a cooling working medium. Researchers at IIT Delhi have developed a high efficiency, auto-rotating solar PV tower for photovoltaic power generation in a given area throughout the day.
