

# Small wind turbine power output

## Overview

---

Turbine for small-scale wind turbines are typically 1.5 to 3.5 metres (4 ft 11 in - 11 ft 6 in) in diameter and produce 0.5-10 kW at their optimal wind speed. Most small wind turbines are, but (VAWTs) may have benefits in maintenance and placement, although they are less efficient at converting wind to electricity. To optimize efficiency, the (the ratio of bl.
