

Solar energy storage experiment

Overview

Try these 5 STEM experiments with your kids to teach green energy. Solar cells are devices that can be used as a source of power when there is light shining on them, but they stop producing energy when they are not in the light. One way to store the solar energy for later use is to use a solar cell to charge something called a capacitor. The capacitor stores the. From spinning fans to mini solar cars, each experiment demonstrates energy conversion while inspiring problem-solving, creativity, and awareness of renewable energy's role in our lives. Solar Oven Cut a flap in the top of the pizza box leaving a 2" border on the sides and front. Small solar panels are available from a number of sources.
