

Solar panels assembled to generate electricity

Overview

Solar technologies convert sunlight into electrical energy either through photovoltaic (PV) panels or through mirrors that concentrate solar radiation. What actually happens inside a panel?

Why does sunlight create usable power?

And how does that electricity end up running your lights. At a high level, solar panels are made up of solar cells, which absorb sunlight. Both are generated through the use of solar panels, which range in size from residential rooftops to 'solar farms' stretching over acres of rural land. Small PV cells can power calculators, watches, and other small electronic devices.
