

Solar panels to produce batteries

Overview

During the day, solar panels convert sunlight into electricity, which can be used immediately or stored in batteries. The stored energy can then be consumed based on the company's needs, typically at night or during peak electricity pricing periods. Generac Solar & Battery Solutions provide a more powerful, resilient and smart way to manage your energy needs. With rising electricity costs and an aging grid, it's time for a reliable solution that gives you the power to use energy on your own terms. Why?

Because home battery storage has something to offer everyone—from backup power to bill savings to self-reliance. This approach not only enhances the advantages of this renewable energy source but also provides significant savings on energy bills and increases contributions to the energy transition. Imagine waking up to a sunny day, knowing your home is running on energy. Solar battery storage systems are used to store excess solar energy generated by solar panels for latter use when the sun isn't shining.
