

# Solar power generation and energy storage concept

## Overview

---

Solar energy has emerged as a pivotal component in the pursuit of sustainable energy solutions. The AES Lawai Solar Project in Kauai, Hawaii has a 100 megawatt-hour battery energy storage system paired with a solar photovoltaic system. Sometimes two is better than one. The reason: Solar energy is not always produced at the time. Solar energy is the radiation from the Sun capable of producing heat, causing chemical reactions, or generating electricity. The total amount of solar energy received on Earth is vastly more than the world's current and anticipated energy requirements. Small PV cells can power calculators, watches, and other small electronic devices. Both are generated through the use of solar panels, which range in size from residential rooftops to 'solar farms' stretching over acres of rural.
