

Solar power generation panels connected to the grid

Overview

While solar panels generate DC electricity, the grid operates using AC (alternating current) electricity. This means that homes and businesses can't directly use DC electricity from solar panels. An inverter is needed to convert the electricity so that it can be used. Solar systems integration involves developing technologies and tools that allow solar energy onto the electricity grid, while maintaining grid reliability, security, and efficiency. For most of the past 100 years, electrical grids involved large-scale, centralized energy generation located far from. Professional Installation is Critical: Grid-tied solar systems require licensed electricians and multiple permits, with the interconnection process typically taking 2-8 weeks and costing \$200-\$2,000 in fees alone.
