

# Solar power station salt

## Overview

---

Molten salt is a heat transfer fluid (HTF) and thermal energy storage (TES) used in solar power plants to increase efficiency and reduce costs. This technology's primary purpose is to provide a consistent and reliable power source, overcoming the intermittent nature of direct sunlight. Operators can take advantage of a new ternary. A new generation of molten salts has been developed by Yara and proven to reduce the cost of solar power generated using Concentrated Solar Power (CSP) technology.
