

# The key to photovoltaics is energy storage

## Overview

---

Photovoltaic (PV) systems convert sunlight into electricity, acting as power generators. Think of PV as a water pump and ESS as a reservoir – one creates resources, the other. The AES Lawai Solar Project in Kauai, Hawaii has a 100 megawatt-hour battery energy storage system paired with a solar photovoltaic system. Sometimes two is better than one. Coupling solar energy and storage technologies is one such case. Energy storage systems (ESS) store excess energy for later use, functioning like rechargeable batteries. The synergy between photovoltaic systems and energy storage not only enhances. The synergy between photovoltaics and energy storage enhances grid stability, 3.
