First off, the short answer is yes, you can connect multiple batteries to an inverter. But you must understand how you connect your batteries together affects what you can and can't do! For example, connecting your batteries in series will be different to connecting in parallel. 12V batteries are the most popular, offering flexibility for configuring direct current systems. This approach is essential when powering inverters or equipment that requires 24V, 36V, or. In my last tutorial post, I published a diagram about how to connect one batter to an inverter / UPS and this post is also about inverter batteries diagram but in the last post, I shared about one battery which we use for 12 volts inverter/UPS.
