The invention discloses a peak-valley arbitrage user side energy storage capacity configuration method based on a greedy algorithm, which comprises the following steps: collecting electricity price information, energy storage system state and user electricity consumption mode data;. The invention discloses a peak-valley arbitrage user side energy storage capacity configuration method based on a greedy algorithm, which comprises the following steps: collecting electricity price information, energy storage system state and user electricity consumption mode data;. These systems not only help in managing the variability of renewable energy but also offer economic benefits to users through peak-valley tariff arbitrage. Peak-valley tariff arbitrage involves buying electricity during off-peak hours when the tariff is low and storing it in the battery. By integrating portable energy storage capabilities with charging functions. In December 2025, the National Development and Reform Commission (NDRC) and the National Energy Administration issued the “Notice on Doing a Good Job in the Signing and Performance of 2026 Medium and Long-Term Electricity Contracts” (Fa Gai Yun Xing No. In the electricity market, electricity prices fluctuate with changes in supply and demand. The above two principles are the coordination between energy storage life loss and energy storage "low storage and high release" arbitrage. We can decide which principle.
