

Uninterruptible power supply is placed in the basement

Overview

The placement of your UPS is critical. It should be installed in a location that: Has adequate ventilation to prevent overheating. Is away from direct sunlight and heat sources. Provides easy access for monitoring, maintenance . An uninterruptible power supply (UPS) or uninterruptible power source is an electrical apparatus that provides emergency power to a load when the input power source or mains power fails. A UPS differs from an auxiliary or emergency power system or standby generator in that it will provide. My other options besides keeping it into the bedroom are to put it in the basement right below my room and thread the wires through a hole in my floor (I live on the ground floor, the hole already exists lol) or put it in my closet (the closet is quite large actually). If it does mean Uninterruptible Power Supply, you should check your utility room. That way I could just plug.
