

Wasteland Solar Power Generation Policy

Overview

Utilizing wasteland for solar energy development involves a multifaceted approach: 1. Assessing environmental impact, 3. While the government mandates the use of wasteland for the solar park, multiple factors have prompted grid-integrated, ground-mounted solar projects to conceive in either agricultural lands, peri-urban, or near the urban periphery. Table 1 indicates the waste-degraded land classifications for these. Decentralized generation of solar power with photovoltaic (PV) panel installation in the wastelands, accompanied by the setting up of grid-connected systems emerges to be the befitting solution. As a part of its commitment to mitigate the effect of climate change the government of India has set a target of 175 GW capacity to increase the capacity of non-conventional energy (renewable). Solar power plant installation units in wasteland areas are not only helpful in job opportunity creation but also help in water resources conservation, infrastructural development, energy revenue generation, and above all land resource management. In a competitive energy market, any attempt to use waste-degraded land parcels, without policy regulatory support, can bring large-scale disruptions in the.
