

# What are the existing energy storage systems

## Overview

---

Key EES technologies include Pumped Hydroelectric Storage (PHS), Compressed Air Energy Storage (CAES), Advanced Battery Energy Storage (ABES), Flywheel Energy Storage (FES), Thermal Energy Storage (TES), and Hydrogen Energy Storage (HES). PHS and CAES are large-scale. Electrical Energy Storage (EES) systems store electricity and convert it back to electrical energy when needed. The first battery, Volta's cell, was developed in 1800. Energy storage systems are essential for modern energy. Energy storage technologies allow energy to be stored and released during sunny and windy seasons. Although it may appear to be a simple concept, energy storage can be accomplished in a variety of ways. Electricity was largely generated by burning fossil fuels in the grid of the twentieth century. This multi-revenue approach significantly improves project economics.
